DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Bordner et al. (U.S. 5,947,320). Bordner et al. teach a reusable plastic drum 10, having a plastic drum body 12, a lid 16 and a lockband 40. The drum body 12 has a convex upper chime at 54. The lid 16 has a channel at 60 which receives the upper chime. The gasket is element 78.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bordner et al. in view of Cramer et al. (U.S. 5,573,118). Bordner et al. disclose the claimed invention except for the drum body and lid being made of polypropylene. Cramer et al. teach that it is known to provide a drum body and lid made of polypropylene (see col. 4 lines 26-31). It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the drum of Bordner et al. with the drum body and lid being made of polypropylene, as taught by Cramer et al., in order to give the drum the strength and rigidity characteristic of polypropylene.

Art Unit: 3727

5. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bordner et al. Bordner et al. disclose the claimed invention except for the width of the chime being 0.190 inch. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the drum of Bordner et al. with the chime having a width of 0.190 inch, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. *In re Rose*, 105 USPQ 237 (CCPA 1955).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art is cited for the drum body, lid and lockband.

7. THIS ACTION IS NON-FINAL.

8. In order to reduce pendency and avoid potential delays, Group 3720 is encouraging FAXing of responses to Office Actions directly into the Group at (703)305-3579. This practice may be used for filing papers not requiring a fee. It may also be used for filing papers which require a fee by applicants who authorize charges to a USPTO deposit account. Please identify the examiner and art unit at the top of your cover sheet. Papers submitted via FAX into group 3720 will be promptly forwarded to the examiner.
